

Transfer of Blood Products between Hospitals

There may be occasions when it is necessary or beneficial to transfer blood products from one hospital to another. When this occurs, please follow LifeStream's guidelines below.

Transfers Performed with a LifeStream or Courier Driver

Blood products may be transferred between hospitals using a LifeStream or approved courier driver.

When a transfer is completed using a LifeStream (or courier) driver, billing for the product will be transferred to the receiving hospital.

Transfers Performed without a LifeStream or Courier Driver

Blood products may also be transferred between hospitals without the use of a LifeStream or courier driver. However, products transferred in this manner are not eligible for return to the blood bank.

Please note that charges can only be transferred to active LifeStream accounts. The sending hospital is responsible for completing the Transfer Form (0171F1) in full and submitting it to LifeStream Hospital Services by fax at **909.386.6855** to ensure proper billing transfer.
